

WEST VANCOUVER

WVAM!

Virtual Family Art Project

Have you taken a lot of walks in nature recently? The artist, Gohar Dashti, is interested in plants and their root systems.

Why do plants have roots? Can we see a plant's roots or are they hidden? Are root systems the same length as the height of a plant? Look at some of these photographs of Iranian plants that usually grow in the desert. These plants have been uprooted from the ground and photographed by Dashti. Please use these sheets to draw or collage your own roots and plants, based on the Salal plant and Nootka Rose, which grow in West Vancouver.

Inspired by the current virtual exhibition, *Gohar Dashti: Dissonance*, we are pleased to present our second virtual WVAM! Family Art Project. When open to visitors, the West Vancouver Art Museum welcomes people of all ages to come and make art inspired by our exhibitions on the last Saturday of every month. Until we can see you in person, we will present art projects that you can do at home. Please share your art with us and we will post our favourites!

Generously supported by the West Vancouver Foundation.

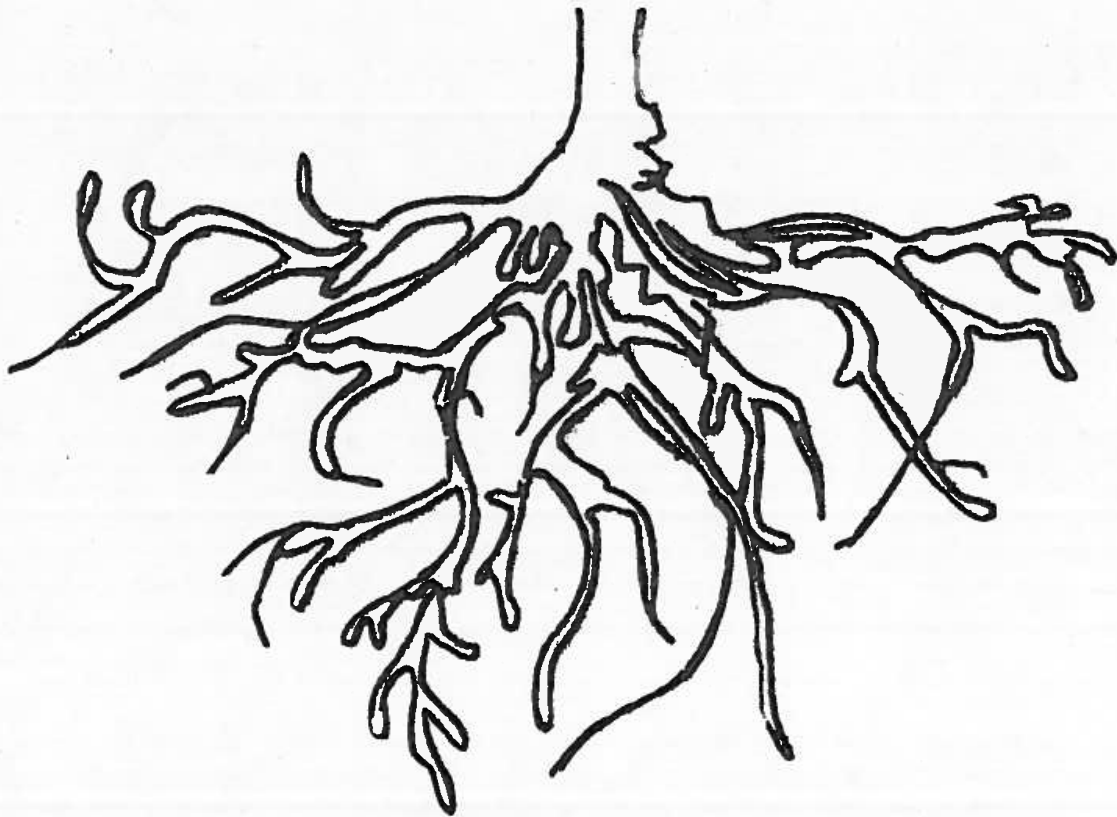

Gohar Dashti: Dissonance is viewable on our website, westvancouverartmuseum.ca/dissonance.
